

Company Profile

Green Footprint Solutions Ltd (GFS) is a Thailand registered company created in 2013 to service the hospitality, educational and commercial markets with earth safe, people safe, cost saving products and technologies. Headquartered in Bangkok, we have representatives throughout Thailand as well as authorized dealers in Laos, Vietnam, Malaysia and the Philippines.

Our work focuses on two areas – safe, clean environments and energy savings.

Clean and safe environments are critically important, particularly in hotels, restaurants and schools. This has become even more a focus with the recent CoVID-19 crisis. However, providing safe environments for people using toxic chemicals does not qualify as a best practice that is truly safe, when such alternatives exist.

GFS provides non-dangerous cleaning and sanitizing products that are an alternative to toxic chemical based cleaners and disinfectants. Chemical products are harmful to people and the environment. Biotechnology based **InnuScience** products clean as well as toxic chemicals while being completely safe and low cost. **SteriPlant** sanitizing water, a 100% natural product, is an electrolyzed water product that effectively kills bacteria, viruses, mold and fungi on surfaces as well as in entire rooms, offices or other spaces.

Puresan is a unique water sanitizing solution which is an effective, safe substitute for toxic chlorine. Puresan can be used in swimming pools, bulk water treatment, feedwater for livestock and sewerage treatment plants. Mineral ionization destroys bacteria, coliforms and viruses without the use of dangerous chemicals.

Energy waste means less profits. Today, a hotel must consider new best practices to assure sustainability for the hotel as well as the industry and the planet. Reliable, cost effective technologies curb energy use when rooms are not occupied as well as reduce the amount of energy used when spaces are occupied. They are good for profitability and necessary for sustainability.

AuVerte occupancy based control systems assure that costly AC systems run only when needed. LED lighting replacements from Osram LEDVance reduce the cost of lighting your building to a fraction of what current lighting systems consume.

GFS can help you with your best practices for a sustainable future - saving money, improving your building's safety and leaving a "green footprint" for our children.
